

RES IN SCOTLAND

COMMITMENT TO EXCELLENCE

RES is one of the world's leading independent renewable energy developers. A respected privately owned British company with over 30 years of experience of planning, building and operating renewable energy projects, RES has been at the forefront of wind energy development since its inception and has developed and/or built almost 9,000 megawatts (MW) of renewable energy capacity worldwide.

In Scotland, RES has developed and/or built eleven projects, including the recently completed Meikle Carewe Wind Farm in Aberdeenshire. Our Scottish base is in Glasgow, where a team of over 130 staff work on the development, construction and operation of wind farms within the country as well as exporting their technical services worldwide.

At RES we are proud of our reputation for designing projects that optimise renewable energy generation whilst minimising any effects on local people and the environment. We work closely with communities, local authorities and independent experts to ensure our wind farms are built to the highest standards.

We want to be good neighbours and will listen to and address any questions or concerns you may have.
